

# Tempered Glass Cup Announcement

## 钢化玻璃杯说明

Tempered glass has a carrying capacity that is around five times higher than regular glass, which makes the glass more durable and extra resistant to impact. However, tempered glass may as any other glass, shatter if exposed to knocks, strikes or scratches, even if the shattered pieces are rarely sharp. That's why it is out most important to always handle glass cups with care.

钢化玻璃的承载能力约为普通玻璃的五倍，因此这款杯子更加耐用，耐撞性更强。尽管钢化玻璃受到敲击、撞击或刮划后，也会像其他玻璃一样破碎，但钢化玻璃破裂后产生的锋利碎片会比普通玻璃少很多，从而减少风险。在使用玻璃杯时，请小心轻放减少撞击。
